

The Legacy and Distinction of Lindal Cedar Homes

Founded in 1945 by Sir Walter Lindal, **Lindal Cedar Homes** pioneered custom, prefabricated wood-frame home manufacturing. What began in Toronto shortly after World War II relocated to Seattle, Washington, in 1966 to be near the world's finest stands of Western red cedar. Over eight decades and more than 50,000 built homes later, Lindal remains an industry benchmark for craftsmanship, architectural flexibility, and structural durability.

What Makes a Lindal Home Special?

- **Engineered Post-and-Beam System:** Unlike standard stick-built construction, Lindal utilizes heavy timber post-and-beam structural framing. This eliminates the need for load-bearing interior walls, allowing for expansive, open-concept floor plans and dramatic floor-to-ceiling glass walls that blend indoor spaces with surrounding landscapes.
- **Premium Western Red Cedar:** Lindal utilizes high-grade Western red cedar—a natural material renowned for its warm visual grain, natural resistance to decay and insects, exceptional thermal insulation, and dimensional stability across diverse climates.
- **Architectural Versatility:** Through a grid-based modular design system, homeowners can fully customize their plans—from classic A-frame and log-style cabins to sleek, mid-century modern residences developed in collaboration with renowned architectural institutions like Frank Lloyd Wright's Taliesin Fellows.
- **Lifetime Structural Warranty:** Lindal was the first green home manufacturer to back its home packages with a lifetime structural warranty, supported by rigorous engineering designed to withstand extreme wind, snow loads, and seismic activity.
- **Sustainable Building Practices:** Every package features sustainably harvested lumber, energy-efficient building envelopes, and a partnership with American Forests to plant trees for every home built.
